

Fertilizers Recommendation System For Disease Prediction

Team ID : PNT2022TMID35128

Project Flow :

- A web Application is built where ,
 - A. Farmers can interact with the portal build
 - B. Interacts with the user interface to upload images of diseased leaf
 - C. Our model built analyses the Disease and suggests the farmer with fertilizers are to be used
- To accomplish the above task you must complete the below activities and tasks;
 - A. Download the dataset.
 - B. Classify the dataset into train and test sets.
 - C. Add the neural network layers.
 - D. Load the trained images and fit the model.
 - E. Test the model.
 - F. Save the model and its dependencies.
 - G. Build a Web application using a flask that integrates with the model built.
